HYACINTH BULBS FROM HOLLAND

Most dependable source of color and fragrance in the garden, and indoors where they are easily forced into bloom during the winter. No other bulb is more easily grown. Plant out-of-doors in clumps of three, six or twelve. Set 8 inches apart and cover with 4 inches of soil. Don't mix fertilizer with the soil. Spread it on top after you have the bulbs covered.

It is very interesting to grow Hyacinths in glasses in the house during the winter. Let us tell you how an expert does it. Send for the circular: "How to Grow Exhibition Hyacinth Blooms in Glasses."

Here are the six varieties of Hyacinths we import from Holland. They are considered the best of their color.

CITY OF HAARLEM. Large, clear yellow bells.

KING OF THE BLUES. Spicy fragrance; dark blue-purple richness.

LA VICTOIRE. Glistening deep carmine-red.

These Hyacinth bulbs come to us in two sizes. The largest, called by our growers in Holland "Exhibition Size," 19 centimeters or more in circumference, are the best for forcing indoors, also for show gardens when particularly large blooms are wanted for display. Our most popular size, 16 to 17 centimeters is offered in the same varieties shown above.

PRICE OF EXHIBITION SIZE BULBS—19 Centimeters and Over
35c each; \$1.00 for 3; \$3.75 for 12; \$7.50 for 25; \$27.50 for 100.

PRICE OF MEDIUM SIZE BULBS—16-17 Centimeters
25c each; 65c for 3; \$2.45 for 12; \$4.65 for 25; \$17.50 for 100.

BOTANICAL TULIPS

These are "collected" species, most of them natives of Central Asia. The brightly colored flowers often come with petals that are pointed, twisted and reflexed. Nice in rock gardens and low borders. They are a most interesting class of Tulips. Plant the bulbs 8 inches deep and do not fertilize. Put them in a well-drained soil and in a warm location. Let them stay where they are, do not move them. They will flower for many years. They are perfectly at home on steep, gravelly slopes and in rock gardens. Always plant them in clumps of 3 to 9 bulbs.

CLUSIANA. The "Lady" Tulip. Outer petals cherry-red, inner petals white. Flowers about 1½ inches in diameter on 8-inch stems.

\$1.15 for 12; \$2.15 for 25; \$8.25 for 100

FOSTERIANA, RED EMPEROR (Madame Lefebre). Giant scarlet-red flower, probably the largest red Tulip in existence today. Most unusual. Blooms very early in the spring when one appreciates a spot of color in the garden. Grows 18 inches tall.

\$1.25 for 12; \$2.40 for 25; \$9.25 for 100

KAUFMANNIANA. Creamy white, more or less tinged with rosy red on the outside of the petals. Unusual in form. Often called the Water Lily Tulip. Grows 6 inches high and blooms very early in the spring.

\$1.15 for 12; \$2.15 for 25; \$8.25 for 100

SYLVESTRIS (Florentina Odorata). A sweet-scented wild English Tulip that is very fine for naturalizing. Blooms very freely. Golden yellow on rather strong, wiry stems about 12 inches tall.

\$1.15 for 12; \$2.15 for 25; \$8.25 for 100

Here Is the Way We Plant Tulip Bulbs

Bone meal is spread on the ground where the bulbs are to be planted, using 10 pounds to each 100 square feet (10 x 10). The earth is then spaded to a depth of 12 inches, firmed down and raked smooth. The bulbs are then placed on top of the ground, about 6 inches apart, at the spot where they are to be planted. (Better effects are obtained where at least 6 bulbs of a variety are planted together. We keep them in groups of 25 to 50 of a kind.) A trowel digs out a hole 6 inches deep in which the bulb's set and the hole filled in with earth. The important item of food for the bulb comes next. Tulips, Hyacinths, Narcissus, etc., make their roots right after they are set out in the fall. Large blooms come from bulbs that have large root crowns, and large roots come from proper feeding. Any complete plant food is good, spreading it on the surface of the ground after the bulbs have all been set, using 5 pounds to each 100 square feet. We finish up with a smooth raking for it will be too late to do this in the spring when the Tulips are breaking through the ground. It is not at all necessary to take Tulip bulbs out of the ground each year. Many bulb gardeners plant them 8 inches deep and never move them.

These long-pointed flowers of the English Garden or Cottage Tulip type are indescribably graceful and lovely. In the opinion of garden architects, they dominate the Tulip family and are the backbone of the Tulip garden. Cottage Tulips begin flowering as the Single and Double kinds fade and continue in bloom well into the late Darwin and Breeder season. Be sure to include these Cottage Tulips in your planting. They bridge the gap between the early and late varieties.

It is described by a Holland grower as "stems better than the best Darwin, petalage longer than the largest Darwin, two weeks earlier than the earliest Darwin. Altogether bolder and better than anything in either Darwin, Breeder or Cottage class. Red with an appealing flush of deepest roseate orange." 32 inches high. Shown in color on page 7.

GROW YOUR OWN MUSHROOMS AT HOME: WITH MAGIC MUSHROOM TRAYS

Just put the Mushroom Trays down in your basement or in your fruit and vegetable storage cellar and water them.

Inexpensive, easy to set up, no odor at all. Begin bearing in three to four weeks and continue to produce delicious mushrooms for two to four months.

Many people who like to grow plants, either in the garden or in the house, have been asking us how they could grow mushrooms in their basements during the fall and winter months. Until the introduction of the Magic Mushroom Trays this was a most difficult operation.

The preparation of the mushroom bed was an expensive, messy, and generally unpleasant task. The odor from the fresh barnyard manure, necessary in making the beds, made living in the house just about impossible.

These Magic Mushroom Trays have changed all of this. They are complete "mushroom beds" packed in easily handled shallow, wooden flats, all ready to bear a crop as soon as they are placed in a suitable temperature and given water. Mushrooms can easily be grown in any basement, fruit or storage cellar, where the temperature stays between 52 and 65 degrees.

These prepared trays will supply your table with fresh mushrooms in 3 to 4 weeks from the time you start them growing and continue to produce for two to four months.

They make a most interesting and profitable hobby. All of the materials used in these Magic Mushroom Trays have been pasteurized so that it is impossible for any other type of growth to appear on the trays except edible mushrooms.

Orders for trays are filled starting October 1st and continuing until May 1st. We suggest that at least four trays be started at one time in order to have mushrooms in sufficient quantities for an average sized family. Customers have reported a bushel or more mushrooms from four trays.

Magic Mushroom Trays are produced by men with years of experience in the growing of mushrooms for the wholesale market. The mushroom beds in these trays are prepared in the same way as those which are used for commercial mushroom production.

The cost of the trays can be reduced by getting friends to order with you so that you can take advantage of the low rate when getting ten or more trays at one time.

Complete instructions for growing mushrooms from these trays are sent with every shipment.
